

ANDESITE

About Andesite Lavastone

Andesite is an igneous volcanic rock types with specific composition and texture between that is commonly found in the environment in the border region tectonic subductions or the areas with high volcanic activity, such as Indonesia.

In this day and age andesite stone is still used as the material for the purpose of wall cladding, sculpture garden for decoration, and a lot more.

Essentially, this stone is suitable for presenting classical natural atmosphere in your home.

Andesite is one of our main products. The source is very abundant and its location is just a few miles away from our office/factory.
